

Managed End User Help Desk

Increasing end user productivity through improved IT Service Levels

Our 24/7 'Proactive' help desk service for end user support includes a software 'agent' for remote control and patching, as well as anti-virus & anti-malware, encryption, software distribution and optional bare metal backups and recovery

Optimizing technology-driven employee productivity

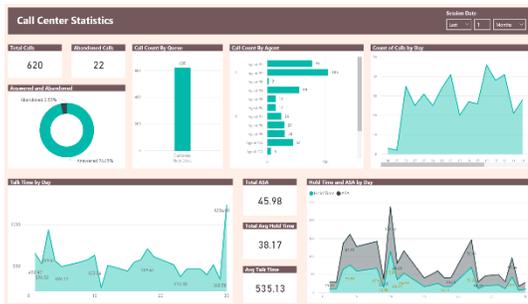

nDivision understands that every minute that an end user is unable to access an IT service or technology costs the organization money. If that user is a knowledge-worker, C-level executive or other key resource, the costs can be significantly higher. Furthermore, equipment costs may only represent 20% of the Total Cost of Ownership, with support costs representing the other 80%. Therefore, optimizing access to technology is a critical area of cost-saving and improved productivity.

Challenges in providing efficient end user support

Many organizations find that providing a multi-tiered Help Desk for its end users can be challenging. Often, Tier 2 resources cannot be spared to address complex end user issues, which leads to protracted user response and resolution times. Also, when resources are limited, providing a high level of support outside of business hours and over weekends can be difficult to do effectively.

A 'Proactive' Help Desk

Our Proactive service provides a single point of contact for ticketing and remediation through email, web or by phone, and is charged for based on the number of devices. We install an agent on each device that allows us to quickly provide remote control support and keep patches up to date. The service includes anti-virus & anti-malware protection (or we can leverage your solution) and software distribution for operating systems and applications. Bare metal backups and recovery is an optional service. We leverage manufacturer warranties or a spares program, as needed. **All support staff for our Proactive service are based in the U.S.**

Executive Dashboard for real-time reporting

Our real-time Executive Dashboard provides data on the quality of service (each interaction can be rated by the user), call center statistics (abandonment, talk time, hold time, etc.), inventory data (asset type, operating system, location, etc.) and patching data (installed, missing approved and failed). The Speed of Service metrics includes service level achievement, speed by priority, speed by time and speed by support team member. The Resolved Tickets metrics includes count by team, percentage closed by team, mean time to respond and mean time to resolve. Custom views can also be created as a separate services engagement.
